

# IS YOUR G6 MAXED OUT?

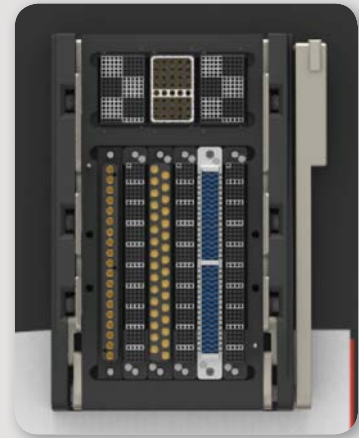

Upgrade your G6 solution with a new G6x receiver to add more I/O to your test station and extend the functionality of your test program

# KEEP IT

Keep your existing G6 ITAs and current test program sets. The new G6x receiver is backwards compatible with a standard G6 ITA, but also offers a 33% I/O increase for the design of new ITA enclosures. At just over 5U in height, the new design features three iCon positions built into the top of the frame to provide up to 480 additional signal contacts. Compact and versatile, the G6x is ideal for commercial testing, contract manufacturing testing, and other high-volume test environments.

VPC offers dozens of preconfigured, off-the-shelf iCon modules that offer a variety of I/O, including: signal, RF, power, fiber, pneumatic, and high speed digital.

## SPECIFICATIONS
