

➤ **Agilent 34980A Multifunction Switch/Measure Unit InterConnect Solutions**

VPC InterConnect solutions for Agilent's 34980A Multifunction Switch/Measurement Unit enable rapid connection between instrumentation and the unit/device under test (U/DUT).

VPC offers cable assemblies designed specifically for the 19 optional plug-in modules available for the 34980A as well as for the Mainframe itself. Designed to the specific performance requirements of each modular instrument, VPC cable assemblies deliver outstanding performance while enabling easier system integration and quick system setup.

➤ **Features and Benefits**

- Pre-wired assembly for rapid integration between instrument modules and Mass InterConnect receiver
- Specific designs for each modular instrument ensure signal integrity and performance
- VPC connector modules deliver over 20,000 mating/un-mating cycles for reliable connections over the life of the test system

**AGILENT'S 34980A**

Agilent's 34980A Multifunction Switch/Measurement unit offers a broad range of functionality that includes DC to 20 GHz switching, counter/totalizer, digital I/O with pattern capabilities, and D/A converters in one compact, high-performance modular platform.

► **Cable Assemblies Available for Agilent 34980A Mainframe Instruments**

VPC provides ready-to-use cable assemblies to connect between standard Agilent instruments and the VPC receiver. One end of the cable is connected to the Agilent instrument; the other is installed into the receiver to make a fast, efficient connection. Use them to mass interconnect your system and make the most out of your Agilent application.
